SOFT SKILLS

PROJECTS

C360 Data Profiling

Build a daily attribute-level profiling framework for C360 events using Snowflake, Snowpark, and Python.

The system detects missing or broken data early by measuring total count, null count, distinct count, and completeness percentage.

- Discovered critical data quality attributes from DAM and Snowflake.
- Visualized metrics in Grafana for easier monitoring and decision-making. **[booking.com intern]**

Traffic flow optimization and congestion management

Developed an intelligent traffic monitoring prototype using YOLO-based vehicle detection integrated with Raspberry Pi and Arduino.

- Implemented ML-assisted traffic density analysis to dynamically optimize signal timing.
- Improved traffic flow efficiency and reduced congestion in test scenarios. **[Ideafest Winner]**

Online Bill Payment Website

Built a responsive web application using React JS that allows users to pay bills through multiple methods including UPI, cards, net banking, etc.

- Implemented secure and seamless payment flow with real-time validation.
- Designed clean UI/UX for better user experience across devices.

Law Advisor / Smart Law Suggestion System

Developed a web application that suggests relevant laws based on user input and requirements.

- Integrated smart search and filtering to match legal sections accurately.
- Built with focus on accessibility and simplified legal information.

Logistics Management System

Full stack web application for managing logistics operations using React JS, MySQL and Spring Boot.

- Features include order tracking, inventory management, delivery assignment, and status updates. / Streamlined operations and improved data visibility for logistics workflows.

JotDown – Note Taking Website

Full stack note taking web application using React JS, MySQL and Spring Boot.

- Users can create, update, categorize and organize notes efficiently.
- Built with authentication, search and responsive UI for productivity.
